PROFESSIONAL SUMMARY

Entry-level Data Analyst and B.Tech Data Science graduate (CGPA 7.65) with hands-on experience in SQL, Excel, Python, and statistical analysis. Built an Excel dashboard with PivotTables and KPIs, wrote and debugged MySQL queries on a 7-table database, ran hypothesis tests on customer purchase data, and performed data cleaning and EDA. Skilled at turning raw data into clear insights and business recommendations.

TECHNICAL SKILLS

Data Analysis: Data Cleaning, Data Wrangling, Exploratory Data Analysis (EDA), Statistical Analysis, Hypothesis Testing, KPI Analysis, Trend and Seasonality Analysis, Feature Engineering, Web Scraping, Business Insights

SQL (MySQL): JOINs (Inner, Left), Subqueries, Aggregation (COUNT, SUM, AVG), GROUP BY, HAVING, COALESCE, Date Functions, Query Debugging and Validation

Microsoft Excel: PivotTables, PivotCharts, Slicers, Excel Tables, Structured References, Formulas (IF, OR, COUNTIF, SUMIF, TEXT, Array), Dashboards, KPI Cards

Python: Pandas, NumPy, Matplotlib, Seaborn, SciPy, Statsmodels, BeautifulSoup, ydata-profiling, Scikit-learn (Linear Regression, Random Forest, Classification), Jupyter Notebook

Statistics: Chi-Square Test, Welch t-Test, Fisher's Exact Test, Bonferroni Correction, Logistic Regression, Odds Ratio, Confidence Intervals, Correlation Analysis

Visualization, BI & Tools: Dashboard Design, Data Storytelling, Excel Charts, Power BI (Basic), MySQL Workbench, VS Code, Git, GitHub

PROJECTS

Hotel Booking and Revenue Dashboard | *Excel*, *PivotTables*, *Slicers*, *Structured References*
GitHub: github.com/Adeen0504/Hotel_Booking_Revenue-Excel-Project

- Built an interactive Excel dashboard on 7,000 bookings (synthetic dataset) across 4 hotel branches and 5 booking channels, using Excel Tables with calculated columns, 8 PivotTables, 6 charts, KPI cards, and slicers.
- Identified that 69% of booked revenue ($4.02M of $5.85M) was still pending, Suites generated 33% of revenue from 16% of bookings, and 20.1% of bookings (about $1.48M) were lost to cancellations and no-shows.
- Delivered five recommendations: convert pending stays faster, upsell premium rooms, reduce cancellations, run off-season promotions, grow direct bookings.

Customer Purchase Analytics | *Python*, *Pandas*, *SciPy*, *Statsmodels*, *Seaborn*
GitHub: github.com/Adeen0504/Customer-Purchase-Analytics

- Analysed 500 customers across 15 variables to identify purchase drivers; checked data quality and profiled it with ydata-profiling, histograms, and a correlation heatmap.
- Tested three hypotheses using chi-square and Welch t-tests: online customers purchased 53.6% of the time vs 40.3% offline ($p = 0.0039$), while product category and discount use showed no significant link.
- Confirmed robustness with Fisher's exact test, Bonferroni correction, and logistic regression (odds ratio 1.73, 95% CI 1.21-2.49) and wrote a business summary (Imarticus module project).

Social Media Analytics using SQL | *MySQL*, *SQL*
GitHub: github.com/Adeen0504/Social-Media-SQL-Analysis

- Wrote 10 SQL queries on a 7-table MySQL database (1,000 rows per table) to find most active users, top posts, trending hashtags, influencers, and peak posting hours.
- Identified 47 inactive users (re-engagement list) and 85 users who followed others but never engaged, using JOINs, subqueries, GROUP BY / HAVING, COALESCE, NOT IN, and date functions; validated results and fixed errors such as INNER JOIN dropping zero-like posts and row fan-out inflating counts.

Instagram Liked Posts Analysis | *Python*, *BeautifulSoup*, *Pandas*, *Matplotlib*, *Jupyter Notebook*
GitHub: github.com/Adeen0504/INSTAGRAM_EDA

- Parsed 1,503 raw records from an Instagram HTML export using BeautifulSoup and cleaned them into 1,203 structured entries across seven fields (reel links, captions, hashtags, owner, username, datetime, genre).
- Categorised posts into genres using a hashtag-keyword mapping and visualized genre preference, top creators, peak engagement times, and hashtag frequency in a styled HTML report; used an anonymised synthetic dataset in the public repository to protect privacy.

EDUCATION

B.Tech in Data Science | Sphoorthy Engineering College, Hyderabad | CGPA: 7.65 | 2023 - 2026
Diploma (Polytechnic) | Mahaveer Institute of Science and Technology | Percentage: 85% | 2020 - 2023
SSC (10th Board) | The Progress High School | CGPA: 9.8 | 2013 - 2020
