MEER ADEEN ALI

B.Tech in Data Science • Fresher

Phone: 7382126809 • Email: meeradeenali01@gmail.com • GitHub: https://github.com/Adeen0504

SUMMARY

B.Tech Data Science graduate (CGPA 7.65) who has built and deployed two full-stack data applications, including a flood-impact prediction system covering 33 Telangana districts. Comfortable across the data workflow — cleaning, modeling, evaluation, and dashboarding — seeking an entry-level Data Analyst / Data Science role.

EDUCATION

B.Tech in Data Science *2023 – 2026*

Sphoorthy Engineering College, Hyderabad • CGPA: 7.65

Diploma (Polytechnic) *2020 – 2023*

Mahaveer Institute of Science and Technology • Percentage: 85%

SSC (10th Board) *2013 – 2020*

The Progress High School • CGPA: 9.8

CERTIFICATIONS

The Ultimate Job Ready Data Science Course *Jul 2026*

CodeWithHarry • Certificate ID: CWH-THE-ULTIMATE-JOB-READY-DATA-SCIENCE-COURSE-JDWGPNG0

Oracle Cloud Infrastructure 2025 Certified Generative AI Professional *Sep 2025*

Oracle University (Oracle Certified Professional) • Valid until Sep 2027 • ID: 102711482OCI25GAIOCP

Getting Started with Artificial Intelligence *Nov 2024*

IBM SkillsBuild • Verify: https://www.credly.com/go/YjwOdZQD

PROJECTS

Main Projects

Flood Impact Prediction on Agriculture & Economy | *Python • Flask • Pandas • Scikit-learn • Matplotlib*

- Built an end-to-end flood-impact prediction system covering 33 Telangana districts, using historical rainfall, temperature, soil, and crop-stage data to estimate crop and economic loss.
- Trained a Random Forest Regressor achieving an R^2 of 0.41 and mean absolute error of 16.2% on crop-loss estimation, with cross-validation stability of ±0.11; validated via a predicted-vs-actual analysis and top-feature breakdown (rainfall and crop type were the strongest predictors).
- Delivered results through an interactive Flask dashboard — including live prediction inputs, model performance metrics, and economic-impact visualizations — deployed on Render for stakeholder access.

Instagram Liked Posts — Personal Content Analyzer | *Python • BeautifulSoup • Pandas • Matplotlib • Jupyter Notebook*

- Parsed 1,503 raw records from a personal Instagram liked-posts export (HTML) using BeautifulSoup, cleaning and structuring the data down to 1,203 entries across seven fields — reel links, captions, hashtags, owner, username, datetime, and genre.
- Built a personal insight report covering genre preference breakdown, top creator rankings, peak engagement time patterns, and hashtag frequency analysis using Pandas and Matplotlib, packaged into a styled HTML report.
- Designed with privacy in mind — a synthetic dummy dataset replaces real personal data in the public GitHub repository, demonstrating data-privacy best practices.

Personal & Academic Projects

Twitter Bot Detection | *Python • Scikit-learn • Pandas • Seaborn • Matplotlib*

- Benchmarked four classification approaches — Decision Tree, Naive Bayes, Random Forest, and a Rule-Based classifier — using regex-engineered features to detect bot accounts, evaluated via ROC curves and AUC scores.

PrintDrop | *Python • Flask • MySQL • HTML • CSS*

- Built an on-demand printing service platform with user authentication, order management, and real-time order tracking on a Flask + MySQL backend, with a responsive front end across devices.

EduVault | *Python • Flask • Gmail API • MySQL • HTML • CSS*

- Built a centralized academic resource platform using Gmail as free cloud storage, with a MySQL-backed, role-based multi-user schema and a zero-cost Flask interface for uploading and searching content.

TECHNICAL SKILLS

Languages: Python, SQL, HTML, CSS

Databases: MySQL

Libraries & Frameworks: Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, Flask, BeautifulSoup

ML Concepts: Linear Regression, Classification, Decision Trees, Random Forest, Naive Bayes, Train/Test Split, ROC/AUC Evaluation

Data, BI & Dev Tools: Power BI (Basic), Data Cleaning, EDA, Web Scraping, VS Code, Jupyter Notebook, Git, Render (deployment)
